

AUTOCRIB.NET

The revolution in point-of-use dispensing continues with AutoCrib.net. This approach provides enterprise wide inventory visibility to large system users and will also attract smaller customers by significantly reducing the initial expense associated with client/server software licenses.

AutoCrib is the only company that allows its customers to choose between a web-based system and a client/server software application based upon their unique needs. AutoCrib.net gives users the ability to manage the system from a secure website. This eliminates the need for expensive client/server based software packages and the maintenance associated with them.

The AutoCrib.net website provides in excess of 100 management reports from any computer with Internet access. Information detailed in the reports menu promotes item sharing among different plants and the ability to consolidate purchases. This provides the ability to manage inventory at a corporate level. AutoCrib.net uses the latest 128-bit SSL (Secure Socket Layer), a protocol that provides secure communication between the client and web-server.

FEATURES

- Manage inventory enterprise wide
- Data resides on a secure website
- Eliminates need for software and server maintenance and upgrades
- Uses constant data synchronization
- Manages entire point-of-use product line
- Reduces initial investment
- Purchasing / receiving system
- Over 100 management reports
- Automatic e-mail of any report
- Custom reports available
- Immediate notification of critical item shortage
- Five item types
 - Expendable
 - Perishable
 - Durable
 - Gage
 - Kit

HOW IT WORKS

The system uses a data synchronization routine: transactions at the machine level are updated at the website and updates from the website are also reflected at all of the dispensing machines constantly. This approach gives users comprehensive inventory visibility from the bin level, all the way to an enterprise wide view. The system works equally well for small and large organizations because of its unique design.
